

Data Analytics Engineer with 3 years of experience implementing end-to-end ELT pipelines, leading cloud data warehouse migrations, and developing actionable analytics applications. Passionate about building systems that turn complex data into usable insights, and continuously expanding my skillset on the side through hands-on projects across data engineering, data visualization, and web app development.

Languages and Technologies

Data Engineering & Warehousing: Snowflake, Advanced SQL, Dimensional Modeling (Star Schema), Fact/Dimension Design, ETL/ELT Architecture, Data Normalization & Standardization, Data Validation & Quality Controls, Qlik Replicate, Qlik Compose, Talend, Python

Analytics & BI: Qlik Cloud, Tableau, Power BI, Executive / Financial / Operational Reporting, Time-Series & Period-Over-Period Analysis, Data Visualization, Automated & Scheduled Report Distribution, Master Data / Golden Record Strategy

Additional: Excel, Pandas, Scikit-learn, C#, Java, R, .NET Core, Azure, GitHub, SSMS, REST APIs, Postman

Employment

Data Analytics Engineer	Capital Data Analytics / VizAuto	Feb 2023 - Present
--------------------------------	---	---------------------------

Consulting for 20+ clients across automotive, industrial / manufacturing, and wholesale / distribution domains. Proven track record with automating enterprise reporting for 15+ clients, significantly increasing operational efficiency and returning entire weeks of capacity back to client teams each month.

- Translate business requirements into structured data solutions that improve transparency, reduce operational friction, and enable faster decision-making.
- Architect ETL/ELT pipelines to ingest, replicate, and standardize data from 3-10+ source systems (DMS, ERP, CRM, On-Prem) into Snowflake warehouses and Qlik Cloud analytics environments, processing 100+ million records per day, with refresh intervals as low as 15 minutes.
- Model scalable dimensional schemas, fact tables, and link-table structures on a regular basis to enable high-granularity, cross-functional analysis across sales, finance, operations, and executive domains.
- Develop analytical applications and visualizations in Qlik, supporting 100-5,000+ users focused on time-series analysis, organizing thousands of accounts into structured financial statements, KPIs, and forecasting performance.
- Engineer automated reporting workflows using Mail & Deploy to eliminate manual processes through scheduled distribution, embedded downloads, SFTP delivery, and SharePoint integrations. Delivering up to 50+ reports daily across 1000+ recipients, reportedly saving clients 80+ hours of manual work per month.
- Lead end-to-end BI system modernization for two clients transitioning from legacy reporting tools to modern cloud-based architectures, providing data stewardship write-back capabilities, trigger-based reloads and governed data models.

Data Engineering Intern	Nissan	May 2022 – Aug 2022
--------------------------------	---------------	----------------------------

- Assisted modernization of mainframe architecture to Snowflake cloud warehouse.
- Built pipelines for fragmented systems and restructured datasets using star schema principles.
- Validated DB2 to Snowflake loads and identified merge logic defects.
- Documented over 1,000 legacy reports to support BI migration strategy.

BI Developer Intern	Zurn Water Solutions	Apr 2021 - May 2022
----------------------------	-----------------------------	----------------------------

- Administered the company migration from Tableau Server to Tableau Online and Snowflake,
- Migrated over 500 workbooks, 75 data sources, and 400 users.
- Assisted in development for proof-of-concept modernization using Snowflake and Matillion.
- Administered permissions and external reporting environments.

Full-Stack Developer Intern

Capital Data

May 2020 - Mar 2021

- Developed .NET Core web application for large-scale Excel ingestion into Azure SQL.
- Implemented Entity Framework for scalable CRUD architecture.
- Built front-end components using HTML, CSS, and JavaScript.

Education

M.S. in Data Science

Marquette University

Jan 2021 - May 2023

- Specialization in machine learning and big data
- **Graduate Coursework:** Visual Analytics, Data Mining, Business Intelligence, Business Analytics, Database Systems

B.S. in Computer Science

Marquette University

August 2018 – May 2022

- **Undergraduate Coursework:** Artificial Intelligence, Database Systems, Senior Design Project, Web Programming, Algorithms, Programming Languages, Operating Systems

Technical Projects

Nonprofit Explorer

Building a normalized data warehouse across IRS Form 990, 990-EZ, 990-PF, and 990-T XML filings by engineering a schema concordance layer that consolidates field inconsistencies and manages structural drift across tax years and return types. The goal is to have the concordance dynamically generate DDL scripts to create and modify warehouse tables, while Python-based ingestion pipelines automate large-scale XML extraction and transformation across millions of filings, each containing up to 6,000 fields.

Python, Azure SQL Server Database, Power BI

Strava Activity Map

A geospatial activity map that transforms my Strava data into an interactive map. Every workout is drawn as a color-coded polyline, layering all activity into one unique, evolving visual. It's a fun way to stay motivated, explore new paths, and cover every street someday.

- [Connor's Map](#) (my personal map)
- [Tim's Map](#) (worth checking out, only a few streets left to cover!)

License Plate Tracker

A personal project with the goal to identify rare, available custom license plates in Wisconsin. Designed a systematic method to generate and prioritize plate combinations, and built a Selenium-driven automation to query, capture, and organize results, replacing slow one-at-a-time manual searches.

- [Plate Status Viewer](#) (availability not guaranteed)

Laurie Lundgren Color & Design

Modernizing an interior design consultation business by developing a web-app to create and edit consultation summaries, view previously unavailable analytics, and provide clients with a web portal to view their consultation summary.

Azure, SQL, C#, Power BI, HTML, CSS, JS, JQuery, Google API, EF Core

Feed Mama (Senior Design Project):

Managed a team to develop a food delivery app for iOS and Android.

Azure, SQL, React Native, Node.js, Doordash API
